

HAVERO

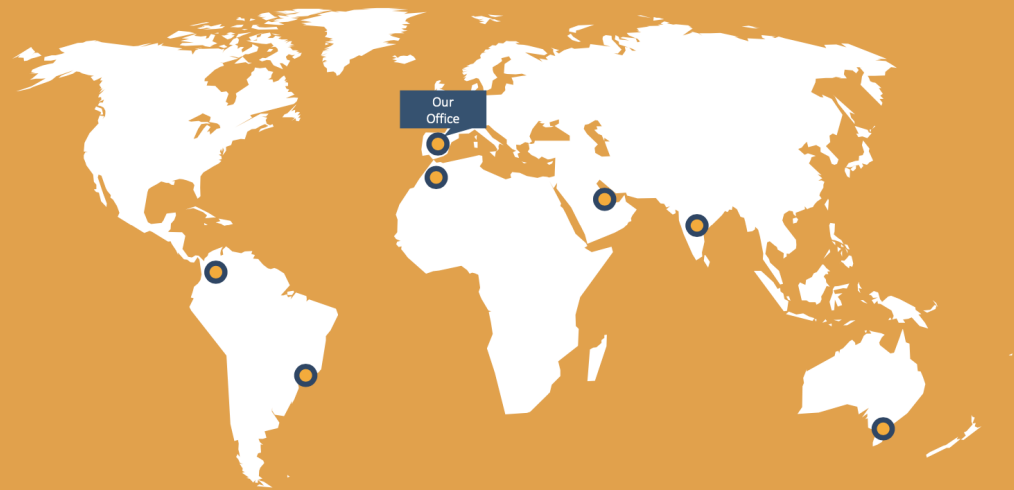

HISTORY

On December 16, 2017 the first Hackathon sponsored by Santiment is organized in OurSpace, Marbella. The "SmartCars" application for renting cars between individuals, using the Blockchain, won one of the prizes, and so the motivation of the team to continue investigating arose.

On August 20, 2018 we settled in Madrid as a base of operations where we began to develop methods of analysis and projects with Blockchain to optimize and solve problems.

Today we put at your disposal all our advances.

Marbella, Madrid (Spain) - São Paulo (Brazil) - Kuwait (Kuwait) - Dubái (United Arab Emirates) - Medellín (Colombia) - Casa Blanca (Morocco) - Bangalore (India) - Melbourne (Australia)

INTERNATIONAL PRESENCE

PRODUCTS & SERVICES

Blockchain

Discover with us infinite possibilities to improve the traceability and transparency of your operations

1. Difficul venue management

When the restaurant is at its full capacity, the main priority is to serve quickly and by doing this, there is no attention to data analysis, such as: order timeframe, preparation time, how long have the customers stayed...

2. Complex digital services and high prices

The installation of the of the system in charge of managing the orders is complex. Clients have to register and the business owners have to dedicate too much time introducing menu information. In addition, it is expensive and not everyone can afford it.

3. Long waiting time

All the customers at a restaurant or bar, have experienced long waiting times when making their orders, asking for the bill or any other enquiries.

4. The new normal in health and the environment

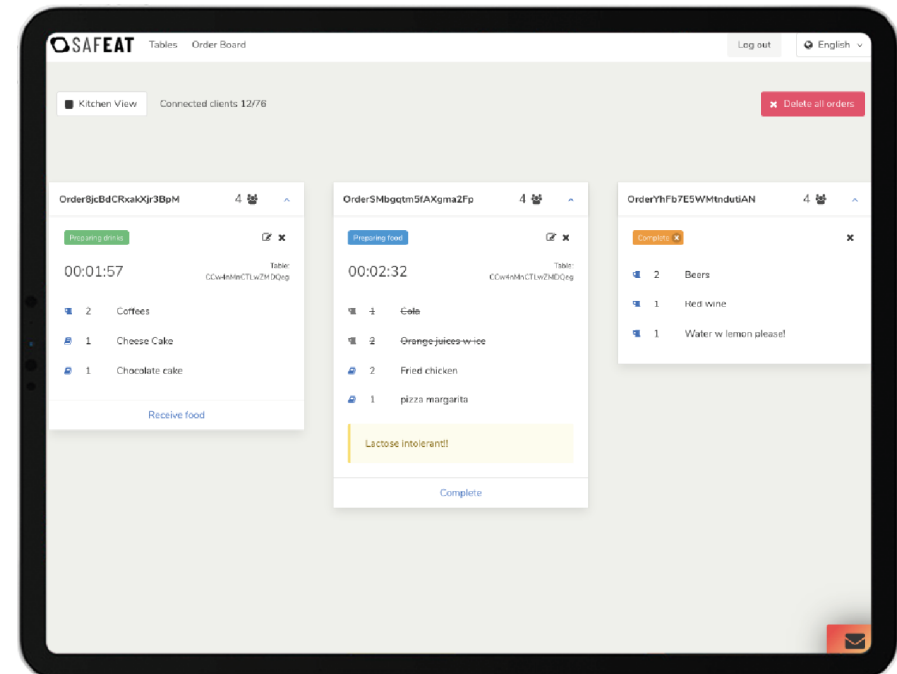

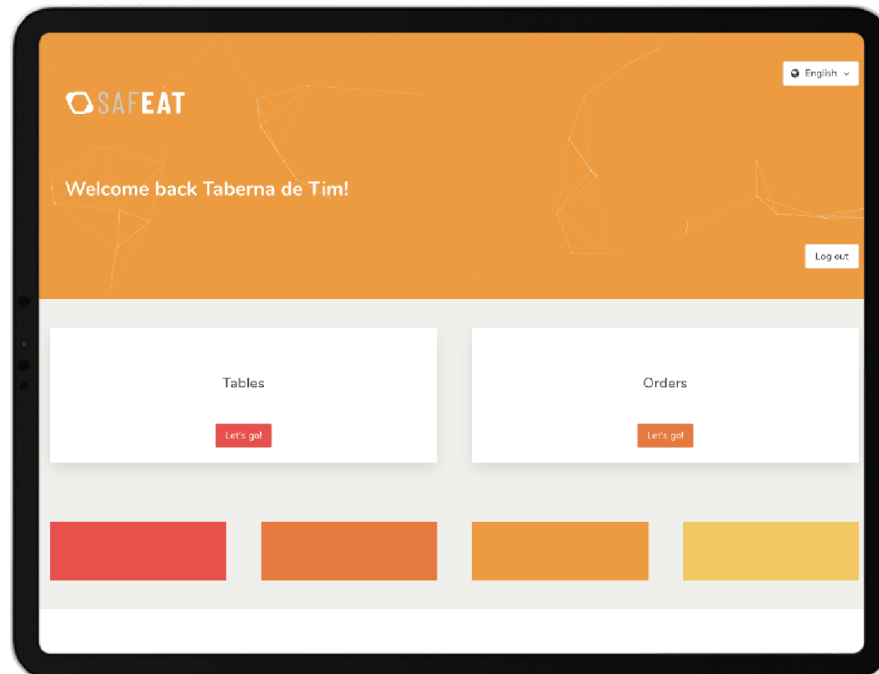

Following the new security protocols in hospitality is complex and makes environmental awareness more complicated, due to the new social and economic situation.

Solution

A simple and flexible web platform where
hospitality professionals only need to:

1. Register
2. Print the QR codes per each business place.
3. Receive and manage orders

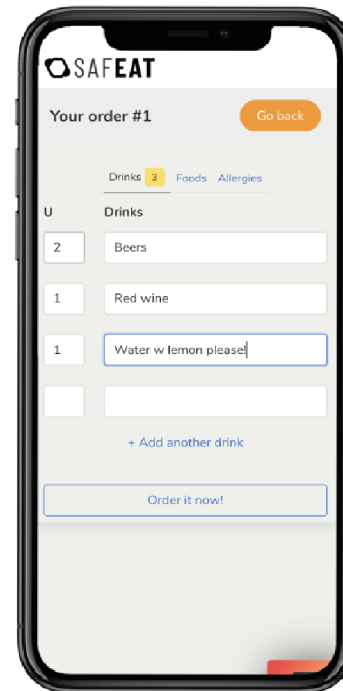

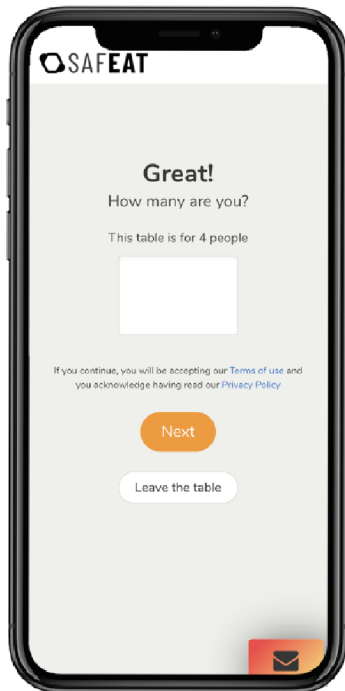

Solution

More importantly, **clients** will not need to download anything nor register, just:

- 1. Scan the QR code**
- 2. Write and send the order as if it were a digital note pad**

Product 4 owners

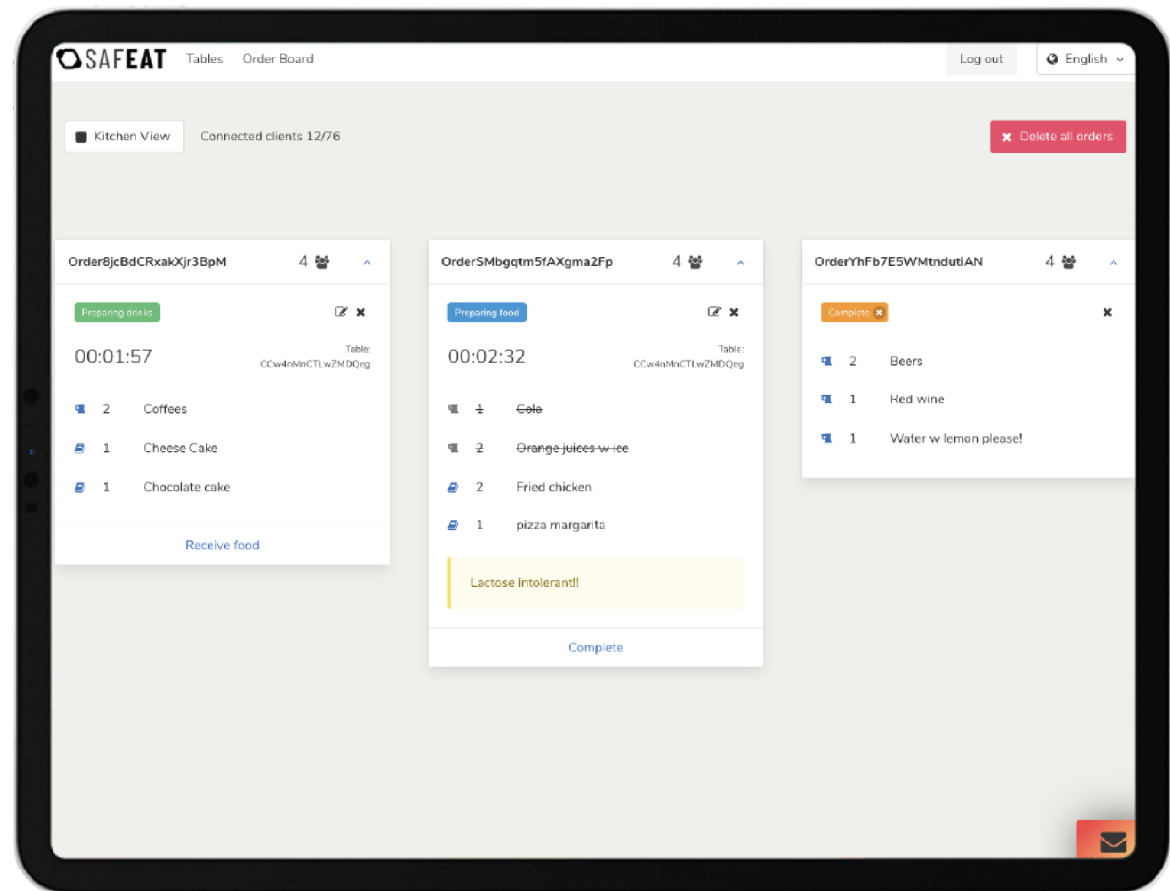

Kitchen view of only food

Time management

Status indicators

Capacity control

Online chat

Product 4 clients

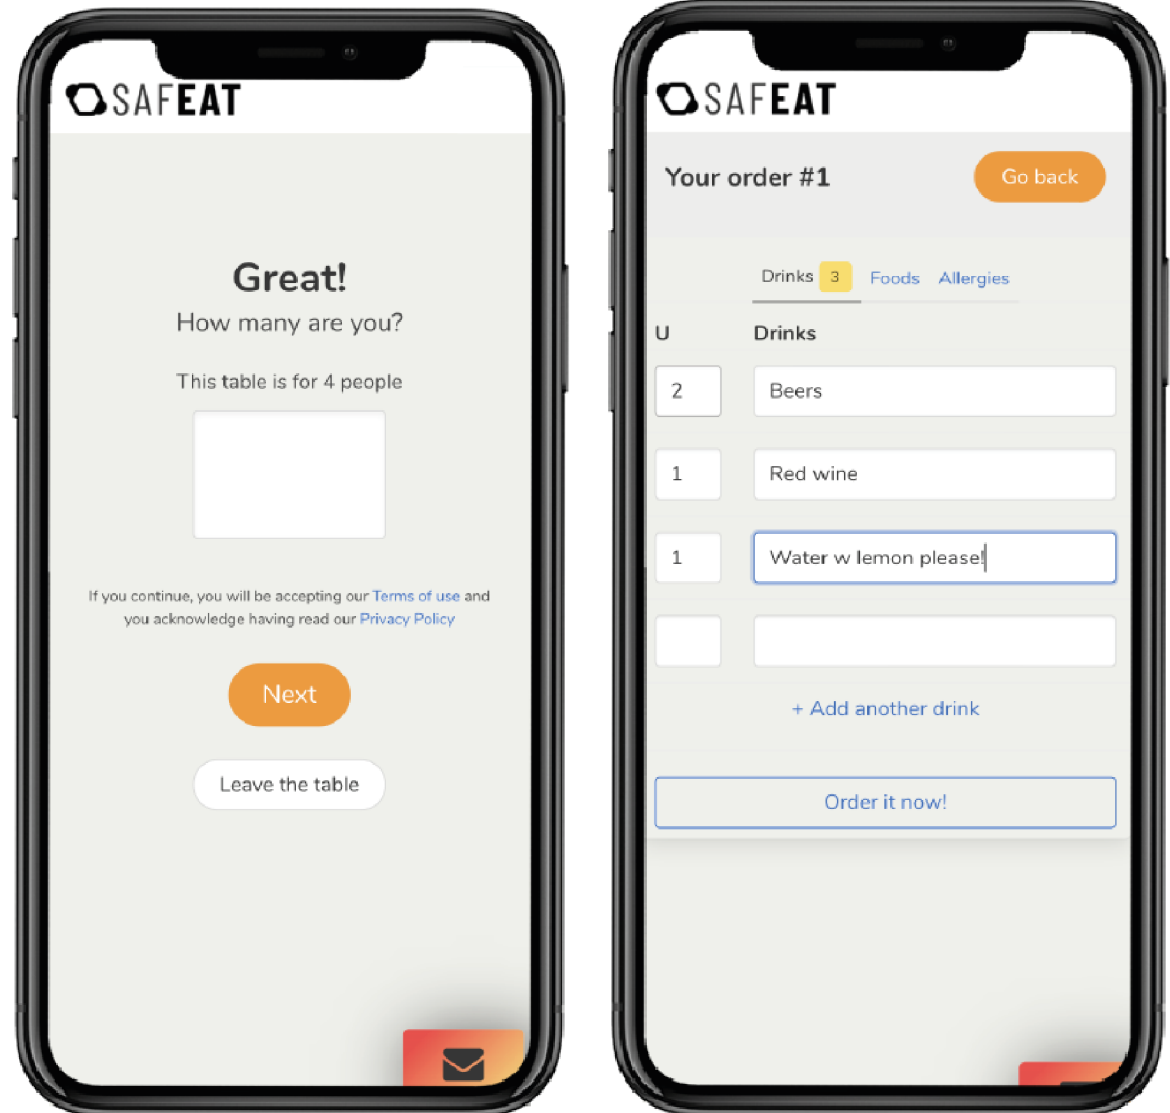

1. Scan the QR code
2. Indicate number of guests
3. Check the digital menu
4. Customise your order

You can always

Check the menu
Make a new order
Ask for the bill

No downloading. No signing up. Try it!

Competitive Adv

CHEAPER

SAFEAT is 80% cheaper than any other competitor

EASIER

Clients do not need to register/sign up, just scan the QR code and order, as opposed to other apps. Hospitality professionals will not have complex settings

MORE HUMAN

The clients can text custom orders and in case of any question, they can use the online chat connected to the venue

LITE VERSION

SAFEAT'S lite version, allows small business owners to be able to enjoy the service for free

CONSTANTLY EVOLVING

Our IT team receive requests and suggestions from hospitality professionals, to adapt SAFEAT to their management needs.

DESIGN AND BRANDING

SAFEAT is more than a web platform. It is a concept in the new normal we are living.
